Specification: How to subtract date fields and get number of days?

Following are the design requirements which take place in Liquid Office:
Design two Entry Fields, “ENTRY1” and “ENTRY2” on your form. “ENTRY1”or Date1, “ENTRY2”or Date2.
If they are host fields then enable the Read-only property for these fields, and place it off the page.
If they are NOT host fields then place it on the page appropriately.
Set the Entry format as “Date” and Format as “M/D/YYYY”.
Design the Target Entry Field, “ENTRY3” on your form which will carry the expression.
The data entry for “ENTRY1” and “ENTRY2” MUST be completed in order to get the final result.

In order to insert the expression and execute it:

Right Click on the Target Entry Field (ENTRY3). Click on "Expression Builder..."
Click on the "Advanced" if it is set as "Simple" View.
Type the following Expression instead of copying and pasting.
[ENTRY1] - [ENTRY2]
Click Check to confirm the syntax.
Click OK.
Save as Fill and Print PDF.

Preview as PDF to test the expression. Remember to enter the “Initial Value” and remove once the expression is confirmed. Save as Fill and Print PDF, so that it can be uploaded onto eAtlas/TotaleAtlas.

Result: if the data for "ENTRY1" is " 10/05/2007” data for "ENTRY2" is “09/05/2007” then the target field "ENTRY3" will display “30”.
