Auto-populate Fixed Drop List Values from the FISpecific.xsl

Specification: When every document requires a Drop-list selection where the values are expected to change frequently, the values can be defined in the FISpecificXSL.

The Drop-list field is auto-populated using the field values (CSTM_DEPT_BRANCH_VALUES) defined in FISpecificXSL.

The Drop-list field is set as a mandatory field. This field will show when the document is processed and is hidden on the archived version.

Each time value is selected and saved, the Saved session will save the value and will show when session is retrieved.

If the Javascript is added and the document is mapped as decribed below, the values can be changed in the FISpecifcXSL in the future and the updated values will appear on each document.

What are the Design requirements?

1. Drop List - **IMM_UNL_DEPT_FIXED_LIST**
Drop List Property - "General" tab - "Hidden" checkbox is checked.
Drop List Property - "List" tab - "Control Type" set to "Drop-list"
This field is named as IMM_UNL so it will remain unlocked until archived.

2. Multi-line Entry Field - **CSTM_DEPT_BRANCH_VALUES**
Format Tab Properties - "Multi-line" checkbox selected. "Limit text to field size" checkbox selected.
This field can be placed off-the page based depending on the Financial Institution's business requirements.

Fixed List

This field is auto-populated using the FISpecificXSL.
Check-in the FISpecificXSL to auto-populate below field.
